

Installation of the CTAN MusiXTeX Fonts Distribution

Bob Tennent

January 9, 2014

1 Introduction

Before trying to install from CTAN, check whether your TeX distribution provides packages for MusiXTeX; this will be easier than doing it yourself. But if your TeX distribution doesn't have MusiXTeX (or doesn't have the most recent version), this distribution of the MusiXTeX fonts is very easy to install, though you may need to read the material on installation of (La)TeX files in the TeX FAQ¹, particularly the pages on which tree to use² and installing files³.

2 Installing `musixtex-fonts.tds.zip`

In this distribution of the MusiXTeX fonts, all of the files to be installed are in

<http://mirror.ctan.org/install/fonts/musixtex-fonts.tds.zip>

at CTAN. The archive is a zipped TEXMF hierarchy; simply download and unzip this archive in the root folder/directory of whichever TEXMF tree you decide is most appropriate, likely a "local" or "personal" one. This should work with any TDS⁴ compliant TeX distribution, including MikTeX, TeXlive and teTeX.

After unzipping the archive, update the filename database as necessary, for example, by executing `texhash ~/texmf` or clicking the button labelled "Refresh FNDB" in the MikTeX settings program.

You now need to update various font-map files. The details vary from one distribution to another. On any current TeXLive-based system, or a teTeX v3.0 system, execute the command

`updmap --enable MixedMap=musix.map`

if you've installed into a "personal" TEXMF tree, or

`updmap-sys --enable MixedMap=musix.map`

¹<http://www.tex.ac.uk/cgi-bin/texfaq2html>

²<http://www.tex.ac.uk/cgi-bin/texfaq2html?label=what-TDS>

³<http://www.tex.ac.uk/cgi-bin/texfaq2html?label=inst-wlcf>

⁴<http://www.tex.ac.uk/cgi-bin/texfaq2html?label=tds>

(as super-user) if you've installed to a "local" TEXMF tree.

On an older MiKTeX system, you may need to update the system file `updmap.cfg`, using the shell command

```
initexmf --edit-config-file updmap
```

adding the following line at the end if it isn't already there:

```
MixedMap musix.map
```

Then generate revised font maps with the shell command

```
initexmf --mkmaps
```

3 Discussion

Additional documentation, additional add-on packages, and many examples of MusiXTeX typesetting may be found at the Werner Icking Music Archive⁵. Support for users of MusiXTeX and related software may be obtained via the MusiXTeX mail list⁶. MusiXTeX fonts may be freely copied, duplicated and used in conformance to the GNU General Public License (Version 2, 1991, see included file `gpl.txt`).
